Instructions for use

Thank you for purchasing the Musical Fidelity M6si integrated amplifier.

The M6si uses our tried and tested ultra low distortion power amplifier circuitry, which has enough current reserve to drive even the most demanding speakers with ease. A very low noise and distortion, high-quality preamplifier completes the integrated amplifier giving a perfect sound from a compact looking full size unit.

The M6si now features two new inputs for further versatility.

A low noise phono stage has been added to allow direct connection of a turntable for vinyl listening.

An asynchronous USB input has also been included which will connect to computer based home audio and allow full quality playback of digital media, up to and including 24 bits, 96kHz sampling rate.

The M6si will aesthetically match with present and future M6/s series products. Such a combination will yield one of the best high-fidelity systems available at any price.

Used properly and carefully, it should give many years of outstanding musical reproduction.

Dust regularly with a soft duster or soft brush, but be careful when using cleaning or polishing agents - they may harm the surface finish.

If there are any questions about the audio system, please consult the dealer who is there to help and advise.

IMPORTANT! (U.K. only)
This unit is supplied in the U.K. with mains lead fitted with a moulded 13 amp plug. If, for any reason, it is necessary to remove the plug, please remove the fuse holder and dispose of the plug safely, out of reach of children.

It must not be plugged into a mains outlet.

The wires in the mains lead supplied with this appliance are coloured in accordance with the following code:

- Green and yellow ......................... Earth
- Blue .............................................. Neutral
- Brown .......................................... Live

WARNING – This appliance MUST be earthed

As the colours of the wires of the mains lead of this appliance may not correspond with the coloured markings identifying the terminals in the plug, proceed as follows:

- The wire which is coloured green-and-yellow must be connected to the terminal in the plug which is marked with the letter E or coloured green or green-and-yellow, or by the earth symbol: ⚡
- The wire which is coloured brown must be connected to the terminal which is marked with the letter L or coloured red.
- The wire which is coloured blue must be connected to the terminal which is marked with the letter N or coloured black.
- If connecting to a BS1363 plug, a 13 amp fuse must be used.

WARNING:
ANY MODIFICATIONS TO THIS PRODUCT NOT EXPRESSLY APPROVED BY MUSICAL FIDELITY WHO IS THE PARTY RESPONSIBLE FOR STANDARDS COMPLIANCE COULD VOID THE USER'S AUTHORITY TO OPERATE THIS EQUIPMENT.
Installation, Precautions & User Information

This new M6si is designed and built to provide trouble-free performance, but as with all electronic devices it is necessary to observe a few precautions:

- Heed all warnings shown on the back of the product.
- Only connect the M6si to a mains outlet having the same voltage as marked at the back of the unit.
- Always ensure that when disconnecting and reconnecting your audio equipment the mains supply is switched off.
- Position the mains lead and signal interconnects where they are not likely to be walked on or trapped by items placed on them.
- Do not use near water, or place water-filled containers on the M6si, for example, a flower vase or potted plants. **If water does spill inside, immediately pull out the mains plug from the wall socket and inform your dealer, who should then check the unit before further use. Entry of liquid into the M6si is dangerous, and may cause electric shock or fire hazard.**
- Do not place the unit near direct heat sources such as radiators, direct sunlight or other equipment.
- Do not remove any covers or try to gain access to the inside. There are no internal adjustments or fuses you can replace yourself. Refer all service work to an authorised Musical Fidelity agent. *Note: Unauthorised opening of the equipment will invalidate any warranty claim.*
- Dust regularly with a soft cloth or soft brush but be careful when using cleaning or polishing agents - they may harm the surface finish.

The electronics in modern hi-fi equipment is complex and may, therefore, be adversely affected or damaged by lightning. For protection of the audio system during electrical storms, remove the mains plugs.

If after-sales service is required, to help the dealer identify the M6si please quote the serial number located on the rear panel of the unit.
Introduction
Congratulations on the purchase of the new M6si integrated amplifier. Great attention has been paid to internal layout, isolating each circuit section to prevent possible interaction. The unit features a finely tuned and tweaked preamplifier, for smooth sound coupled with low noise and virtually no distortion.
The power amplifier consists of two top quality power amplifiers for the absolute best in separation and imaging. Generously rated, they are enough to drive even the most demanding loudspeakers with ease. Low distortion and very quiet they will deliver all music types exactly as the artist originally intended.
The resultant performance achieved by this unit is among the best in the world. It has excellent signal to noise ratio, low distortion, wide bandwidth and dynamic range, with extraordinary resolution and fine detail.

Cleaning
Before cleaning the unit, switch off power at the mains switch and remove the mains plug from the wall socket. Clean the cabinet and remote control unit using a moist cloth. Using solvents, white spirit or thinners is not advised, as they could damage the surface finish.

Installation
Position the M6si on a stable, horizontal surface where there is no risk of it being knocked, or subjected to vibration such as from loudspeakers.

Important note:
In normal operation, the unit dissipates a small quantity of power at all times, and it is important that it is adequately ventilated. The top and bottom are perforated to allow the smooth flow of heat through the unit. It is therefore not recommended that the unit is enclosed in a cabinet or placed where the ventilation holes are impeded as this could result in excessive heat build-up.
The M6si must be protected from humidity – if the unit is moved from a cold place to a warm room, leave the unit for an hour or so to allow sufficient time for the moisture to evaporate.

Power Connections
The M6si is supplied with a standard IEC mains cable which plugs into the IEC socket at the back of the unit (see page 7). When plugged in and mains supply is present the orange STDBY LED will light.

Audio Connections
RCA Inputs: Connect all RCA single-ended sources to relevant analogue inputs (see page 6 for more information). Use good quality fully connected (signal and ground) coaxial phono cables for all RCA signal connections. Take particular care with PHONO input leads, ensure that they are very well shielded and kept away from mains and speaker leads.

XLR Balanced inputs: Connect source balanced outputs to M6si balanced inputs using good quality XLR balanced leads. Recommended lead wiring is shown on P.6. Note some products simply connect “cold” input pin 3 to ground. This does no harm to unit, but may result in an audible reduction in signal level from this input and a slightly worse signal to noise ratio.

Phono/turntable earth connection
The green earthing post should only be connected if excessive hum is experienced when using a turntable. Connect the turntable earthing lead to this post if hum is noticed. If hum worsens when the earth post is thus connected, then disconnect immediately and investigate the cause elsewhere.
Note: some systems may have more than one direct earth point(s) already involved. This could cause hum problems that may only become manifest itself upon connecting this product. Thus the M6si may not be the root cause of hum detected in a system, even if it is the only device that appears to be making the hum apparent.
There is no harm done if no connection is made to this terminal, as it is not always needed anyway, for example, some turntables have their own earthing arrangement.

USB inputs: Connect USB “A” to “B” cable between USB input and computer (laptop, desktop, tablet or any other suitable USB audio compatible “host”).

Speaker Outputs: Connect loudspeakers to the terminals on the back panel marked as LEFT and RIGHT SPEAKER outputs.
LINE output sockets allow loop through of analogue signals for example, to pass on to a recorder or monitor. It is also the ideal output to connect headphone amps into (headphone amplifier will require its own volume control to allow listening level adjustment). This output is the currently selected source but level is not changed by the front panel volume control.
PRE-OUT output sockets allow analogue signals controlled by the volume, to pass on to, for example, an external power amplifier. This is useful for bi-amping or active “subwoofer” connection where volume out needs to be controlled by the M6si front panel volume knob.
### FACILITIES & CONNECTIONS

1. **ON/OFF** Button
2. **CD** input selector button and LED
3. **USB** input selector button and LED
4. **PHONO** input selector button and LED
5. **VOLUME** control
6. **TUNER** input selector button and LED
7. **AUX1/HT** input selector button and LED
8. **AUX2** input selector button and LED
9. **BALANCED** input selector button and LED
10. **IR RECEIVER** lens

11. **LOUDSPEAKER OUTPUTS** right
12. **4MM BANANA POST** for turntable grounding
13. **TRIGGER IN** 3.5mm mono jack socket
14. **TRIGGER OUT** 3.5mm mono jack socket
15. **LOUDSPEAKER OUTPUTS** left
16. **USB** (type ‘B’) input socket
17. **XLR BALANCED** inputs left and right
18. **MM/MC** cartridge selector switch
19. **PHONO MM/MC** turntable cartridge input RCA sockets
20. **HT/AUX** function selector for **AUX1/HT** input
21. **AUX1/HT, AUX2 CD, TUNER** line level input RCA sockets
22. **LINE OUT** (fixed) output RCA sockets
23. **PRE OUT** (volume controlled) output RCA sockets
24. **IEC MAINS INPUT**

**XLR Balanced input and output lead connections:**

![XLR Balanced input and output lead connections](image)

(for reference, no XLR signal leads supplied)

**Pin functions:**

1. Ground (cable shield)
2. Normal polarity ("hot" or "+")
3. Inverted polarity ("cold" or "+")
The universal remote control shown below enables functions from this and related units to be operated from a convenient distance.

Equivalent buttons on the remote control have the same functions as those on the front panel of the unit. Other functions are only available by remote control.

As the handset uses an invisible infra-red light beam, the front edge must be pointed directly towards the receiver window at the front of the player, without visual obstruction between them.

If the range of the remote control greatly decreases, replace the batteries with new ones. Do not mix old and new batteries – two are required, size AAA, LR03 or SUM-4.

Please dispose of used batteries in accordance to local regulations.

**CD player section (Grey buttons)**
- **REPEAT** – repeats whole disk or selected tracks
- **INTRO** – plays first 10 seconds of each track
- **A/B** – sets repeat start/end to repeat section of track
- **PROGRAM** – programs selection and order of tracks
- **CHECK** – check pre-programmed tracks
- **►►** – fast forward through track
- **TIME** – displays track time/time remaining
- **◄◄** – previous track
- **ll/►** – pause/play button
- **DISPLAY** – dims display
- **SHUFFLE** – plays back tracks in random order

**0-9 Buttons** – Used to select track numbers

**CLEAR** – clears selected pre programmed track

**STOP** – Stop playing/Eject CD

**►►l** – next track

**PLAY** – start CD playback

**VOLUME ▼** – reduces amplifier volume

**CD** – selects amplifier CD input

**USB** – selects amplifier USB input

**AUX1/HT** – selects amplifier AUX1/HT input

**AUX2** – selects amplifier input

**CD inputs section (Grey buttons)**
- **SPDIF** – Selects CD player SPDIF input
- **OPTICAL 1** – Selects CD player OPTICAL input

**Amplifier section (Blue buttons)**
- **VOLUME ▲** – increases amplifier volume

**CD** – Sets CD player in normal CD player mode

**USB** – Selects CD player USB input
Starting
Once all connections are made, turn volume to minimum, and switch on the unit, using the **POWER** button front of the unit. The **MUTE** LED will light. Speaker outputs are muted for about 6 seconds, so no sound will be heard from the speakers. Once 6 seconds is up, the **MUTE** LED goes out, indicating unit is settled, and ready for use.

Volume
The volume should be adjusted for normal listening levels. This is done by turning the volume up/down knob on the front panel.
Adjusting the volume can also be achieved by pressing the volume up/down buttons on the remote control handset (see page 7).

Mute (Remote Control only)
The sound from the speakers may be muted by use of the **MUTE** button on the remote (see page 7).
Press once, and **MUTE** LED will light indicating muted state. No sound will be heard from the speakers.
To return to listening; simply press the **MUTE** button again so **MUTE** LED is no longer lit.

CD
To use the **CD** input, connect CD player outputs to the **CD** input RCA sockets (see page 6).
Select **CD** input by pressing the **CD** button so **CD** LED lights.
Pressing the corresponding button on the remote handset has the same effect (see page 7).

USB
To use the **USB** input, connect computer USB port to the **USB** input type “B” socket (see page 6). Select **USB** input by pressing the **USB** button so **USB** LED lights.
Pressing the corresponding button on the remote handset has the same effect (see page 7).
See P.9 (USB) for further information.

PHONO
To use the **PHONO** input, connect turntable cartridge outputs to the **PHONO** input RCA sockets (see page 6).
Make sure **MM/MC** cartridge switch is adjusted to suit cartridge type being used.
Select **PHONO** input by pressing the **PHONO** button so **PHONO** LED lights.
Pressing the corresponding button on the remote handset has the same effect (see page 7).

TUNER
To use the tuner input, connect tuner outputs to the **TUNER** input RCA sockets (see page 6).
Select **TUNER** input by pressing the **TUNER** button so **TUNER** LED lights.
Pressing the corresponding button on the remote handset has the same effect (see page 7).

AUX1/HT
To use the **AUX1/HT** input as a standard input, move the **AUX/HT** switch on the back panel to the **AUX** position. Connect source outputs to the **AUX1** input RCA sockets (see page 6).
Select **AUX1/HT** input by pressing the **AUX1/HT** button so **AUX1/HT** LED lights.
Pressing the corresponding button on the remote handset has the same effect (see page 7).
To use the **AUX1/HT** input as a Home Theatre input, move the **AUX1/HT** switch to the **HT** position. This input is now unaffected by the volume control, allowing volume control on an external Home Theatre processor to be used directly. Connect home theatre or other source outputs to the **AUX1/HT** input RCA sockets (see page 6).
Select **AUX1/HT** input by pressing the **AUX1/HT** button on front panel or remote, so **AUX1/HT** LED lights.

**IMPORTANT:** Take great care when using the input in **HT** mode. Ensure that the volume control is turned right down on the **HT processor** when first setting up. The **HT** mode is designed for sources which require their own volume control to be used. Connecting sources in **HT** mode with no volume control could result in damage to hearing and/or speakers due to uncontrolled loud sounds.

AUX2
To use the **AUX2** input, connect source outputs to the **AUX2** input RCA sockets (see page 6).
Select **AUX2** input by pressing the **AUX2** button so **AUX2** LED lights.
Pressing the corresponding button on the remote handset has the same effect (see page 7).

BALANCED
To use the **BALANCED** input, connect source balanced outputs to the **BALANCED** input XLR sockets (see page 6).
Select **BALANCED** input by pressing the **BALANCED** button so **BALANCED** LED lights.
Pressing the corresponding button on the remote handset has the same effect (see page 7).
Computer settings for USB

A good quality USB A to B cable is required to connect the unit to the computer. Plug the B (square) end into the socket in the back of the unit, and the A (rectangle) end into a free USB socket on the computer. The computer should now detect the new hardware and install a generic driver automatically. CD, MP3, WAV, AAC, FLAC, and all other audio file types played on any software should now play through the unit. This device has been designed and tested to work with:

PC Windows 98, ME, 2000, XP, Vista, 7, 8
Apple Macintosh OS X
Linux based machines.

and may work with others where a generic USB audio driver is available.

PC users-
Check the computer has picked up the device and is currently using it by clicking: (most Windows versions)
- Start
- Settings
- Control panel
- Sounds and Multimedia
- Audio
Check that “M6si Integrated 24/96” appears under PREFERRED AUDIO DEVICE tab
Use the mixer to select the source or adjust levels if required.

Mac users-
Check the computer has picked up the device and is currently using it by clicking: (MAC OS X)
- System preferences
- Hardware
- Sound
Check that “M6si Integrated 24/96” is selected under the OUTPUT tab.
If the computer’s warning sounds/chimes are to played through the unit, make sure it is selected under the SOUND EFFECTS tab too.
Note: USB may also be selected as an output in some individual programs.

Please note: In all cases the USB Audio “driver” software is supplied with the operating system, and Musical Fidelity do not have, nor issue, any drivers or updates.
For latest driver releases please ensure the operating system is kept up-to-date.

For best results from USB input
Make sure volume knob on amplifier is turned to usual/comfortable listening position (e.g. with pointer at 8 to 9 o’clock position)*.
Select USB input on front panel of amplifier.
Play a piece of recorded music from the computer on preferred media player e.g. Windows Media Player or iTunes.
Check mixer and/or computer volume slider settings are set to a suitable level. Normally “full” or “maximum” setting of the slider gives the best results. Lower settings can detract from overall signal resolution due to computer’s internal media player/ mixer attenuation action.

* This volume position will vary considerably from setup to setup, due to varying speaker sensitivities and personal listening habits.

Please note: This device is a high speed serial data processor, and by its nature, requires a very high volume of USB bandwidth. It will benefit greatly from being the only device connected on its USB ‘bus’. Sharing the same bus with other devices may cause unwanted artifacts such as dropouts or temporary loss of signal. This especially includes the use of the unit on a USB hub/splitter alongside other USB components.
Basic problem-solving with an amplifier is similar to troubleshooting other electrical or electronic equipment. Always check the most obvious possible causes first, such as the following examples:

<table>
<thead>
<tr>
<th>Problem</th>
<th>Probable Cause</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>No power when POWER button is pressed.</td>
<td>Mains power plug is not fully inserted into rear socket.</td>
<td>Plug in securely.</td>
</tr>
<tr>
<td>No sound</td>
<td>Mute function is still active. Wrong connections between input sources and the unit Speakers not connected, or incorrectly wired</td>
<td>Press the MUTE button on the remote control to cancel. Check audio input lead connections. Check speaker cables.</td>
</tr>
<tr>
<td>Sound cut</td>
<td>Loose connection Output overload or short circuit</td>
<td>Check speaker and input connections. Switch unit off. Check speaker connections for shorting strands or wires. When all has been double-checked reduce volume and switch unit back on. N.B. Take great care when bi-wiring or bi-amping that speaker bass and treble linking straps are removed; see speaker manual for more information.</td>
</tr>
<tr>
<td>Sound is not precise, lacking in bass and stereo image.</td>
<td>Speakers are connected out of phase, i.e., connections to one speaker (+ and –) are reversed.</td>
<td>Ensure speakers are connected with same polarity at amplifier and speaker ends.</td>
</tr>
<tr>
<td>Hum.</td>
<td>Audio connector plug not fully pushed in Cable Fault Unsuitable cable (e.g. cable grounds not connected)</td>
<td>Insert plug securely. Check cable is connected at both ends. N.B. Some esoteric cables have internal wiring intentionally disconnected/modified. For best results on all inputs analogue AND digital, please use good quality screened coax; signal and screens both separately connected at both ends.</td>
</tr>
<tr>
<td>No audio output, or too low level output.</td>
<td>Incorrect or missing connections</td>
<td>Check connections and make sure they are secure.</td>
</tr>
<tr>
<td>Turntable/phono hum excessive</td>
<td>Turntable not earthed or needs earthing Turntable already earthed and earthing further creates hum loop in system Earth loops already in system Audio connector plug not fully pushed in Cable fault Unsuitable Cable (e.g. cable grounds not connected)</td>
<td>Check turntable earthing lead is connected to earthing post on M6si. Disconnect earthing lead from earthing post. Investigate for earth loops elsewhere in system. Insert plug securely Check cable is connected at both ends. N.B. some esoteric cables have internal wiring intentionally disconnected/modified. For best results on all inputs AND outputs, please use good quality screened coax; fully connected signal-to signal, screen-to-screen.</td>
</tr>
<tr>
<td>No sound - USB</td>
<td>USB device not working USB cable unplugged or not securely fitted Mixer volume turned down</td>
<td>Check USB input lead is securely connected. See “USB” P.9 to check computer has recognised and is using “M6 Integrated 24/96” for playback. Check volume control on computer is turned up. See note P.9 about “For best results from USB input”</td>
</tr>
<tr>
<td>Remote control does not work.</td>
<td>Amplifier’s POWER off. One or more batteries fitted the wrong way round. Batteries are flat. Remote control is not pointed directly towards the front panel of the amplifier. Interference from another source.</td>
<td>Switch on. Insert batteries correctly. Change batteries for a new set. Ensure there is no obstruction between the remote control and amplifier front. Lighting such as fluorescent, incandescent, or even sunlight contains large amounts of infra red radiation. Ensure such sources are not shining directly on the infra red window as this could swamp the signal from the remote control. Also check the system and any other nearby remotes for stuck buttons.</td>
</tr>
<tr>
<td>Remote control range has greatly reduced</td>
<td>Batteries are running out</td>
<td>Change batteries for a new set.</td>
</tr>
</tbody>
</table>

If none of these actions affect a cure, please contact the dealer, or an authorised Musical Fidelity service agent. Remember; never open the case of the M6si, as this will invalidate the guarantee.
### M6si Manual

**Output**
- **Power**: 220 Watts per channel into 8 Ohms
- **Voltage**: 42 Volts RMS, 20Hz to 20 kHz; onset of clipping 120 Volts peak to peak
- **Current**: 45 Amps peak to peak
- **Damping factor**: 180
- **Output devices**: 2 pairs per channel

**Line input**
- **THD+N**: < 0.007% typical, 20Hz to 20 kHz
- **Signal / noise ratio**: > 107dB ‘A’-weighted
- **Input impedance**: 40 k Ohms
- **Frequency response**: + 0, −0.1dB, 10Hz to 20 kHz

**Phono input**
- **Sensitivity (MM)**: 3mV nominal
- **(MC)**: 0.4mV nominal
- **Signal / noise ratio**: > 84dB ‘A’-weighted
- **Input impedance**: 47 k Ohms (MM and MC)
- **Frequency response**: RIAA/IEC ±0.5dB

**USB input**
- **USB**: Asynchronous, sample rate up to and inc. 24 bit, 96 kHz USB audio stream

**Connections**
- **USB input**: Type “B” socket up to and inc. 24 bit 96kHz USB audio stream
- **Phono inputs**: 1 pair Phono MM inputs
- **Phono grounding post**: 4mm banana post to chassis earth
- **Line level inputs**: 4 pairs line level RCA connectors
- **Line level balanced XLR connectors**: 1 pair
- **Line level outputs**: 1 pair line level RCA connectors, constant level LINE outputs
- **Speaker outputs**: 2 pairs 4mm banana plug/binding posts

**Power requirement**
- **Mains voltages**: 115/230VAC 50/60Hz (factory pre-set)
- **100VAC 50/60Hz (alternative)**
- **Consumption**: <0.5W in standby mode
- **58W on, idle
- 680 Watts maximum**

**Weight**
- **Unit only, unboxed**: 16.6 kg (36 ½ lbs)
- **in shipping carton**: 21.3 kg (47 lbs)

**Dimensions**
- **Wide**: 440 mm (17 ½”)
- **High, including feet**: 125 mm (5")
- **Deep (front to back) including terminals**: 400 mm (15¼")

**Standard accessories**
- **IEC type mains lead**: 10-Amp type
- **Remote control**: M6s series
- **Batteries**: LR03 or AAA, manganese alkaline type 2 off
