

## M6 PRX

„Ballsy sound, extremely low levels of distortion, with plenty of grip...“

Anyone looking for a well-built power amplifier around the £3,000 mark shouldn't miss auditioning one of these. It has a big, no-nonsense, ballsy sound, extremely low levels of distortion, with plenty of grip down below. It really excelled on CD playing dtudiorecorded jazz. It images well, and has many of the qualities of its more expensive relatives, at a price that represents fine value for money.

### Verdict

Clean, detailed, precise and well ordered sound, but with lots of life and visceral punch to match. An excellent mid-price transistor power amplifier, well worth audition.

### For

- precise, focused sound
- airy, spacious treble
- articulate bass

### Against

- lacks a sense of romance
