INSTRUCTIONS FOR USE

Thank you for purchasing the Musical Fidelity A300 remote control integrated Amplifier. Used properly and carefully, it should give you many years of outstanding musical reproduction.

The A300 operates in Class A/B which in our experience offers the ultimate in musical accuracy and pleasure. The A300 is based on ideas and principles developed in the legendary XA1 Integrated amplifier but with subtle changes and improvements.

Aesthetically, the A300 is a perfect match for the A3 CD player and the A3 FM Tuner. Together, they form one of the finest hi-fi systems that you can own today.

Dust regularly with a soft duster or soft brush but be careful using cleaning or polishing agents - they may harm the surface finish.

If you have any questions about anything in your audio system, please consult your dealer who is there to help and advise you.
SAFETY INFORMATION

IMPORTANT!

This unit is supplied in the U.K. with a mains lead fitted with a moulded 13 amp plug. If, for any reason, you need to cut off this plug, please observe the following safety precautions. Please dispose of the cut-off plug safely. It must not be plugged into a mains power supply.

The wires in the mains lead supplied with this appliance are coloured in accordance with the following code:

Green and yellow.............Earth  
Blue..............................Neutral  
Brown.............................Live

**WARNING - This appliance must be earthed**

As the colours of the wires of the mains lead of this appliance may not correspond with the coloured markings identifying the terminals in your plug, proceed as follows:

The wire which is coloured green-and-yellow must be connected to the terminal in the plug which is marked with the letter E or coloured green or green-and-yellow, or by the earth symbol.

The wire which is coloured brown must be connected to the terminal which is marked with the letter L or coloured red.

The wire which is coloured blue must be connected to the terminal which is marked with the letter N or coloured black.

If connecting to a BS1363 plug, a 13 amp fuse must be used.

**WARNING - Radio Frequency Interference (RFI)**

This hi-fi product has been tested to ensure that its operation will not be adversely affected by normal background levels of RFI. It is possible that if this product is subjected to abnormally high levels of RFI the unit may be susceptible and not perform as expected. In the unlikely event of this happening on a regular basis, please contact Musical Fidelity's service department. The unit has also been tested to ensure that it does not radiate excessive levels of RFI that could affect other pieces of electronic or electrical equipment.

The electronics in modern hi-fi equipment is complex and hence may be damaged by lightning. It is possible that during electrical storms the operation of some equipment may be adversely affected. For complete protection of your hi-fi system during such storms, mains plugs and aerial leads should be disconnected.

Always ensure that when disconnecting and re-connecting your hi-fi equipment the mains supply is switched off.
GENERAL ADVICE

INSTALLATION PRECAUTIONS and USER INFORMATION

Your new A300 is designed and built to provide trouble-free performance but as with all electronic devices it is necessary to observe a few precautions.

*Heed all warnings on the back of the unit.*

*Only connect the A300 to a mains outlet of the voltage marked on the back of the unit.*

*Position the mains lead, speaker leads and signal interconnects where they are not likely to walked on or trapped by items placed on them.*

*Do not use near water.*

*Do not place the unit near direct heat sources such as radiators or other equipment that produces heat.*

*Do not place the unit where it can be subjected to direct sun-light.*

*Do not remove any covers or try to gain access to the inside. The warranty is invalid if the unit has been tampered with. There are no user adjustments within. Refer all service work to an authorised Musical Fidelity agent.*

*Dust regularly with a soft duster or soft brush but be careful when using cleaning or polishing agents - they may harm the surface finish.*

*There are fuses in the A300. In the unlikely event that one blows, take your unit to your audio dealer. Do NOT try to replace the fuse yourself or you will invalidate the warranty.*

The remote control enables you to activate the main functions of the amplifier from the comfort of your armchair. The following should be noted when operating the amplifier using the remote control.

- Point the remote control (transmitter) towards the I.R. lens (infra red) on the amplifier.
- Visual contact must exist between the transmitter and receiver.
- If the range of the remote control decreases dramatically, replace the batteries with new ones.

**Before Switching on the Stereo System**

Please read carefully the instructions on the following pages. The functional arrangement of the controls makes the stereo system fairly easy to operate. You should nevertheless study these instructions to get the best from your equipment.

**Important! Unauthorised opening of the equipment will invalidate any warranty claims.**

Note: To help your dealer identify your amplifier if after-sales service is required, please quote the serial number located on the rear panel of the unit.
CONNECTIONS AND FACILITIES

A300 front panel layout
1. Power on indicator LED
2. Power on/off switch
3. Volume control
4. Infra red receiver
5. Phono input select button and LED
6. CD input select button and LED
7. Tuner input select button and LED
8. AUX input select button and LED
9. SACD input select button and LED
10. TAPE input select button and LED
11. Tape monitor button and LED

A300 back panel layout
12. RIGHT speaker output
13. Phono earth connection
14. MM/MC selection switch
15. Phono input
16. CD input
17. Tuner input
18. AUX input
19. SACD input
20. TAPE input
21. TAPE RECORD output
22. PREAMP output
23. LEFT speaker output
24. IEC mains inlet
LOUDSPEAKERS

To get a realistic soundstage and full dynamic range from your A300, use it with loudspeakers of a reasonable efficiency and high power handling. We recommend power handling of at least 150W. An average rating for a loudspeaker these days is about 88dB. This should mean that for an input of 1 watt, measured at 1 metre distance, the sound pressure output will be 88dB. This is the minimum efficiency that we recommend you should use.

WARNING

THE A300 IS A POWERFUL AMPLIFIER AND IS DESIGNED TO SUPPLY HIGH VOLTAGES AND HIGH CURRENTS THROUGH THE LOUDSPEAKER TERMINALS. THEREFORE TO AVOID ANY POSSIBILITY OF AN ELECTRIC SHOCK DO NOT TOUCH THE SPEAKER TERMINALS WHEN THE UNIT IS BEING USED.

BEFORE YOU SWITCH ON

You should make all connections to the A300 before switching on.

Follow this routine before you listen for the first time, and each time you change any connections.

1. Check all the inputs and outputs to the A300.
2. Then check again.
3. Turn the volume control to minimum.
4. Now you can switch on the power and carefully advance the volume to the level you want and enjoy the music.

CONNECTIONS

All connections should be made with the power OFF.

The A300 has 1 phono input which can be used for either moving magnet (MM) or moving coil (MC) cartridges.

The A300 also has 5 line level inputs - CD, Tuner, Aux, SACD, and Tape.

All line level inputs are electrically identical and are suitable for use with any source component with an output voltage in the hundreds of millivolts (mV). This includes CD players, Super Audio CD players (SACD), tuners, tape machines and the audio outputs of video recorders, televisions, DVD and LaserDisc players etc.
**PREAMP OUTPUT**

The A300 has a permanently active preamp output situated on the back panel. This provides extra flexibility for use in multi-room or surround-sound systems etc. This signal comes from the A300's internal preamp and its output level is thus controlled by the front panel volume control.

This output allows easy upgrading by passive bi-amping with a pair of X-A50s or X-A200s.

To bi-amp (which requires bi-wireable speakers) an extra pair of X-ponent amplifiers is attached to this permanent preamp output.

The A300's built in power amps can then for instance drive the left and right channel tweeters whilst the X-A50s or X-A200s drive the left and right channel bass units.

Passive bi-amping in this way can give noticeable gains in clarity, imaging and bass weight.

If you would like further details please contact your dealer or Musical Fidelity directly.

**REMOTE CONTROL**

The A300 features Infra Red remote control of volume, input selection and mute functions via the supplied remote control handset. The Infra Red receiver is the small red lens marked I.R.Receiver. situated on the front panel. It is important to ensure that when operating the remote control, the line-of-sight from the remote to the infra red receiver is not obstructed.

Pressing the volume up or down buttons on the remote handset will advance the motorised volume control in the desired direction.

Input selection can also be controlled with the remote handset.

The mute button on the remote handset mutes the output. To show the amplifier is muted the red LED in the volume control goes out. Press the mute button again to switch the mute off, the red led will light again.
**PHONO**

The A300 has a phono input for turntables fitted with either a moving magnet cartridge (MM) or a moving coil cartridge (MC). Use the MM/MC push button switch to select the type of cartridge that is fitted to your turntable.

**IMPORTANT NOTE** Do not operate the MM/MC switch with the volume turned up.

Some turntable/pick-up arm combinations are fitted with an extra wire called a chassis earth, which should be connected to the green gold terminal on the back of the amplifier.

**TAPE RECORDING**

The A300 has a single tape circuit with facilities for off-tape monitoring with 3-head cassette decks.

Connection of your tape machine to the A300 should be as follows. The tape machine's Tape/Line outputs go to the A300's 'Tape' input sockets.

The tape machine's Tape/Line inputs go to the A300's 'Tape Record' output.

To record, simply select the required source with the source selector button on the front panel. The selected source will now be sent to the 'Tape Record' output for recording by the attached tape machine.

You will also be able to hear the selected source through the loudspeakers. Note - you can adjust the listening level with the volume control without affecting the recording level.

**OFF TAPE MONITORING**

In conjunction with a 3-head cassette deck, off-tape monitoring allows the user to compare the recorded to original sound whilst a recording is made. To do this, first select the required source in the normal way and start recording. The Tape Monitor button on the front panel can now be used to switch between the source signal and the recorded signal allowing direct comparison.

The red LED just above the tape monitor button indicates that tape monitor is selected.

Note that tape (the recorded signal) is selected when the LED is lit. On some 3-head cassette decks there is an additional 'tape/source' switch which will need to be in the 'tape' position for the above to work.

If you are in any doubt consult your tape machine's manual.
Basic troubleshooting of an amplifier is similar to troubleshooting of any other electrical or electronic equipment. Always check the most obvious possible causes first. To give you a few ideas of what to look for, check the following:

<table>

<td>Remote control not pointed at IR receiver lens</td>
<td>Ensure line of sight between remote control and IR receiver lens is not obstructed</td>
</tr>
<tr>
<td>Range of remote control has dramatically reduced</td>
<td>Batteries running out</td>
<td>Change batteries</td>
</tr>
</tbody>
</table>

If none of these actions effect a cure, please contact your dealer, or an authorised Musical Fidelity service agent. Remember, never open the case of the A300 yourself, as this will invalidate the guarantee.
